

Life Expectancy in Gwinnett County

July 2021

Across metro Atlanta, lifespans vary by as much as two decades or more based on geography. Life expectancy is shaped by numerous complex factors beyond an individual's control, such as access to food, sidewalks, and quality education. Many of these factors can be influenced by our work at ARC and that of our partners.

This document provides a snapshot of select social and economic characteristics that vary between the census tracts with the lowest and highest life expectancy Gwinnett County: Lilburn/Providence Christian Academy and Peachtree Corners/Neely Farm, respectively. Consideration of these factors can inform strategies that help to extend lifespans and improve quality of life.

Two neighborhoods 6 miles apart where the average resident has a life expectancy difference of almost 14 years.

Factors Affecting Life Expectancy in Gwinnett County

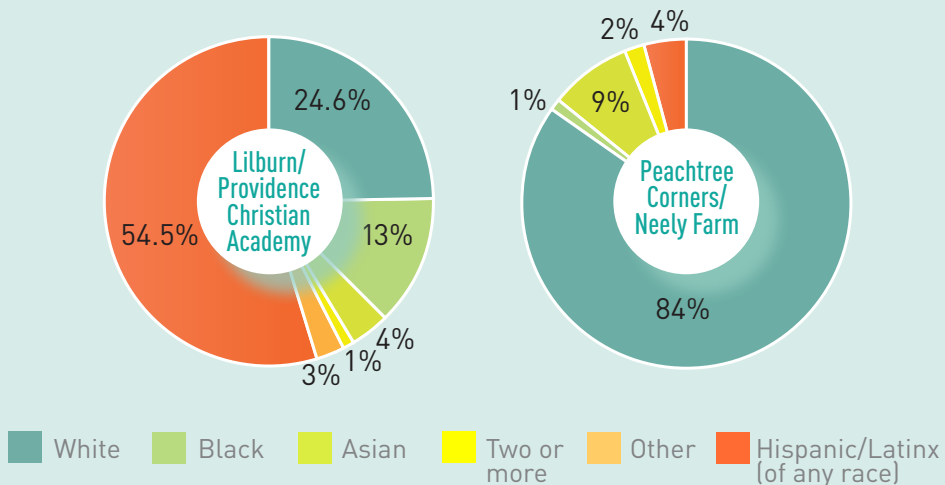

Age Distribution

Two-thirds of residents of the Lilburn-Providence Christian Academy tract are under 45, while about half of residents of Peachtree Corners/Neely Farm are 45 or older. The metro Atlanta region as a whole is more evenly distributed.

Race & Hispanic Origin

On average, with some minor exceptions, studies have shown that white individuals outlive other individuals at every age and level of education. Reasons for this discrepancy vary by individual, but in general, multiple factors are at play associated with systemic racism, including socioeconomic status and access to health care.

Household Income

Many studies have found income to correlate with life expectancy, as higher incomes correlate directly with things like better diets, healthier lifestyles, and access to medical care.

Education

Education level is found to impact longevity regardless of gender or race. Within racial and ethnic groups, life expectancy is found to vary by as much as 13 years between those with the highest and those with the lowest levels of education.

Housing Cost-Burdened Households

Housing cost-burdened households spend more than 30% of their income on housing, potentially leaving insufficient funds for necessities such as food and medicine. A greater percentage of homeowners over the age of 65 are cost-burdened than younger ones in both census tracts.

Limited English Proficiency

People who do not speak English well often rely on informal networks and sources of information unless translated and culturally-appropriate information and services are available.

Percent of Gwinnett County Food Insecure

**projected rise due to COVID*

Food insecurity is limited or uncertain access to enough food. A lack of access to healthy food is linked to a greater likelihood of developing chronic conditions such as diabetes, obesity, and cardiovascular disease—which have been shown to significantly affect life expectancy.

Crashes Involving Motor Vehicles

Research has found a disproportionate number of motor-vehicle-related pedestrian injuries and deaths take place in the nation's less pedestrian-friendly neighborhoods.

Top Causes of Premature Death

Premature deaths due to these causes can be prevented through interventions in areas such as transportation, access to preventative care, disease management, and mental health services.

Addressing the Problem

By working together across the region, we can address metro Atlanta's life expectancy disparities. The ingenuity and resources are here. ARC invites all interested individuals and organizations to join with us and our communities to ensure that the Atlanta region is a place where people of all ages, abilities, and incomes can live high-quality lives, regardless of location.

We are focusing on:

- Place** Concentrate on locations where residents experience the most inequity
- Policy** Work with governmental, philanthropic, educational, nonprofit, and business leaders to improve or amend policies that create inequities and advance policies that promote equity
- Practice** Provide services and programs that address unmet needs
